USER MANUAL

Krakow 2022

INTRO

When writing about caring for firearms, we must realize that it is an ordinary mechanical tool. Just as we do not drive 100,000 km in a car without inspection, we do not shoot for 2 years without cleaning and maintenance.

Neglecting the weapon results in the necessity to use more corrosive substances or mechanical devices for removing dirt, which may result in damage to the oxides or the barrel.

ABOUT

This User Manual created especially for you, our dear clients!

RifleCX use best practices of chemical industry from CX-80 to bring you all best and most efficient practices of cleaning, maintenance and care of your firearms, knives, etc.

Remember, that maximum efficiency can be reached only by using this instructions step by step only.

In other cases your result can be unsatisfying and we are taking no responsibility for that.

REGARDS

RifleCX appreciate your choice of using of our cleaning systems. We hope that using of wide range of our great, high-end products will bring you satisfaction and keeps your weapons and armor in perfect condition all time of using of our care systems.

Tomasz Kołomyjski
CEO of RifleCX

HANDGUN CARE SET

SET made specially to care and clean your handguns (pistols, revolvers). This SET gives you all tools to clean, lubricate and care about you handgun for future years without any issues and with guaranteed safeties for your handgun, high efficiency of cleaning and maintaining of your pistol/revolver. SET is well balanced and have all best products of RifleCX for handguns.

HANDGUN CARE SET CONTENTS

BARREL FOAM. Gently, safe and efficient cleaning of barrel of your gun. Special foam from RifleCX creating a cleaning effect of your barrel. Made in special way not to spend additional time of owner for barrel cleaning and not to damage your handgun barrel.

GUN CLEANER. Safe and efficient instrument to clean sand, old dirt, burnet powder and used lubrication oil from inside of your gun (mechanisms as well) and quick cleaning of your gun from outside. High compressed degreasing fluid just washes away all dirt from internal and external parts of you gun in really short period of time.

COMPRESSED AIR. Smart and easy way to blow out all wet, send, dust and extra fluids from internal and external parts of you gun. Replaces the use of an air compressor both at home and in the field use.

TEFLON SPRAY. Doctor Teflon will help heal all scratches, scuffs and roughness on both metal and wood or plastic of your gun. Special formula of Teflon fluid will lubricate and protect internal and external parts of your gun and barrel from rust, water, dirt and helps to keep your gun in good shape for many years.

CLP OIL. Special synthetic gun oil will protect and lubricate all heavy duty parts of your gun that moving in process of shooting and reloading. Together with Teflon our Oil show great results of lubricating and keeping your gun in good condition for years.

MILITARY SOAP. Clinically tested preparation with proven heavy metal removal properties. It can be used on the hands, the whole body and even hair. In addition, it has been enriched with moisturizing substances that provide the skin with proper protection, without drying it and giving it a velvety smoothness.

TAKE YOUR GUN APART

Open your handgun. Remove the receiver of your pistol, take barrel off and the bolt guide as well. Put the body of the pistol apart.

1. Use **COMPRESSED AIR** (shake it for 10 sec before use) to blow out all extra dirt from all parts of your gun before general cleaning.

2. Shake the bottle of **BARREL FOAM** for 30 seconds, put the white tube on the spout of the can. Take the barrel of you pistol, from front side – close the barrel with your finger and spray the **BARREL FOAM** inside the barrel through white tube until **FOAM** starts to go back and you can see it. Leave the barrel with **BARREL FOAM** inside for 10 minutes.

3. Take **GUN CLEANER**, shake it for 10 seconds. Give a good spay to internal part of the pistol body, until all visual dirt goes out. Don't be afraid to spray a lot and to spray on mechanisms, springs, etc – it will not do any damage. If you see some really heavy dirt, that doesn't want to go out after first spray – wait for 60 seconds and spray again. If it still doesn't help – use special soft or hard gun brush for final cleaning. After all dirt gone – use towel for final cleaning. If you see some fluid that left inside pistol – spray it out with **COMPRESSED AIR** (don't forget to shake it for 10 seconds before using). Do same operation with other internal parts of your pistol (both – guide and receiver).

4. Use **GUN CLEANER** to clean external parts of your pistol (if its needed) in same way as internal parts.

5. Take **TEFLON SPRAY** (shake it for 10 seconds) and spray it on all internal parts of your pistol. Wait for 30 seconds after spaying and use towel to get rid of extra fluid. You can use **COMPRESSED AIR** as well.

6. After 10 minutes take a barrel and spray inside with **TEFLON SPRAY** trough red tube on the bottle. Use special gun sponge or wire to clean out dirt that is left inside barrel. Make visual check of barrel from inside. If barrel still dirty – use **BARREL FOAM** one more time in same way and then spray it one more time with **TEFLON SPRAY**. Use special gun sponge or wire to clean out dirt that is left inside.

7. Spray all external parts of your pistol same way with **TEFLON SPRAY** and use towel and **COMPRESSED AIR** (if needed).

8. Take **CLP OIL** and use one or two drops for each spring and mechanism. Also put one drop at a time with an interval of 3-5 centimeters on the inside of the receiver (traffic rails). Cover all barrel with thin layer of oil – make 5-7 drops on barrel and spread the oil evenly over the surface.

9. Put your gun back together and 10 times distort the receiver.

10. Now YOU are ready to roll!

TAKE YOUR GUN APART

Make sure that your firearm is unloaded and safe for cleaning. Make sure that firearm have no bullets inside receiver, chamber and clip.

BARELL

- If you have a compensator or a silencer, remove it before cleaning.
- If your weapon has an external thread at the end of the barrel, clean it with **GUN CLEANER**. After cleaning, wipe off any residual fluid with a cloth.
- Use **GUN CLEANER** to clean the crown of the barrel and the chamber. If the dirt is stubborn, use a brass brush. After cleaning, wipe the cleaned elements with a cloth.
- Clean the barrel with **BARREL FOAM** (put the tube on the foam applicator, insert the tube into the barrel so that it reaches the barrel crown, plug the barrel outlet with the applicator tip with your finger, then apply the foam evenly by sliding the tube from the side of the cartridge chamber).
- Place the barrel or frame of the weapon so that the barrel remains horizontal. If your weapon has a gas pipe, flood it as well. Remember that the **BARREL FOAM** should work for a minimum of 10 minutes (in the case of the pipe 15).
- After 10 minutes, remove any remaining foam with **TEFLON SPRAY**. It will leave a thin layer of Teflon in the barrel.
- Use felt cleaners to dry the barrel. Remember to insert the rod from the side of the cartridge chamber whenever possible. After wiping the barrel, discard the used cleaner and take out the ramrod. If the 3rd wiper is not clean, pour the foam into the barrel again.
- After removing the dirt, wipe the barrel outside (if possible). This will avoid rubbing the barrel and the gun will work more efficiently. Remember to keep the chamber dry - use **COMPRESSED AIR** on the Weapons.

OTHER WEAPON ELEMENTS

- Remove carbon deposits and dirt with **GUN CLEANER**.
- If the weapon is cleaned regularly, thanks to the high pressure and the right composition, the **GUN CLEANER** should rinse out any dirt.
- In the case of strong and baked dirt, spray the surface with **GUN CLEANER** and wait 30 seconds for it to start to dissolve the dirt. Then use a brass brush.
- Use the cloth to wipe off any remaining dirt and **GUN CLEANER**.
- Spray the whole thing with **TEFLON SPRAY**. Original Teflon prevents corrosion and fills micro-damages in metal. It is safe for plastic and wood.
- Wipe the gun gently with a cloth. Remove excess funds from sensitive places (firing pin chamber, extractor claw) with compressed air to the weapon.
- If you need to preserve the weapon for a long time, do not wipe the **TEFLON SPRAY** with a cloth - a thicker layer of the original Teflon will remain on the weapon, protecting the weapon against corrosion and repairing microdamage in the metal.
- In the case of long arms, all working parts of the weapon (exposed to friction) should be lubricated with **TEFLON GREASE**.
- In the AK type rifle, lubricate the gas piston and the lock with **TEFLON GREASE** - after shooting, remove the dirt and grease with a cloth.
- Use **GUN CLEANER** to remove dirt from the thread, barrel crown and compensator. Clean the muffler with **SILENCER CLEANER**. Use **GRAPHITE SPRAY** on the thread to prevent sintering of the barrel and compensator threads.

REMEMBER

- A gun bought in a store should be depreserved - the same process as for cleaning.
- Use agents dedicated to firearms. The RifleCX - Gun Care System guarantees you the widest range of top quality products.
- It is best to clean the weapon after each shooting. It will take you 10 minutes using the RifleCX - Gun Care System.
- There is no means "for everything" - if something cleans it properly, it does not preserve it, and vice versa. The cleaning process includes, among others, degreasing and the maintenance - application of fatty substances - it cannot be done simultaneously.
- Remove the compensator and silencer - after each shooting, cleaning and protection against sintering with the barrel are required.
- Always protect your firearm from corrosion with **TEFLON SPRAY**. If you don't clean your gun without time in same way and then spray it one more time with **TEFLON SPRAY**. Use special gun sponge or wire to clean out dirt that is left inside.
- Put your gun back together and 10 times distort the receiver.
- Now your gun looks like new and you are ready to roll.

RIFLE SET

SET made specially to care and clean your rifles (single action, semi-automatic and automatic). This SET gives you all tools to clean, lubricate and care about you rifle for future years without any issues and with guaranteed safeties for your rifle, high efficiency of cleaning and maintaining of your pistol/revolver. SET is well balanced and have all best products of RifleCX for rifles.

RIFLE CARE SET CONTENTS

BARREL FOAM. Gently, safe and efficient cleaning of barrel of your gun. Special foam from RifleCX creating a cleaning effect of your barrel. Made in special way not to spend additional time of owner for barrel cleaning and not to damage your handgun barrel.

GUN CLEANER. Safe and efficient instrument to clean sand, old dirt, burnet powder and used lubrication oil from inside of your gun (mechanisms as well) and quick cleaning of your gun from outside. High compressed degreasing fluid just washes away all dirt from internal and external parts of you gun in really short period of time.

COMPRESSED AIR. Smart and easy way to blow out all wet, sand, dust and extra fluids from internal and external parts of you gun. Replaces the use of an air compressor both at home and in the field use.

TEFLON SPRAY. Doctor Teflon will help heal all scratches, scuffs and roughness on both metal and wood or plastic of your gun. Special formula of Teflon fluid will lubricate and protect internal and external parts of your gun and barrel from rust, water, dirt and helps to keep your gun in good shape for many years.

TEFLON GREASE. RifleCX grease is recommended for long guns - thanks to the grease your weapon works smoothly and its wear is very limited. It reduces friction, protects against corrosion and, above all, facilitates cleaning by preventing the carbon deposits from sticking to metal parts. RifleCX, as one of the few manufacturers in the world, uses the original DuPont Teflon® and not Chinese substitutes. Thanks to this, you can be sure that your weapon is covered with a product of the highest quality, which allows for trouble-free operation at low (up to -60 ° C) and very high temperatures while maintaining an unchanged form.

GRAPHITE SPRAY. A lubricant for securing threads exposed to extremely high temperatures. It is perfect for lubricating the thread of the external part of the barrel - thanks to this you will avoid "seizing" of the compensator or silencer. It can also be used for spraying the threads of compensator or silencer.
